

BONGARD & LIND NOISE SCREEN ON THE M3

440 m noise barrier along Motorring 3 at Vestvolden in Rødovre

Dansk Autoværn has for Per Aarsleff A/S been responsible for the delivery and installation of a 440 m noise barrier from the German specialist in noise screens, Bongard & Lind to Vestvolden in Rødovre. The project called for the steel guard to be removed and resumed.

The noise screen was chosen for the task because it has been applied to the other section of the M3 so that now a total of approx. 15 km Bongard & Lind noise barrier is installed on the highway section.

DAV had the experience

Project manager Bahram Shirzad from Per Aarsleff A/S comments on the project: "Dansk Autoværn was chosen for the task because they had the desired experience with the system and because the economy was in order.

DAV is given a 9 on a scale of 1-10 for the collaboration. It went really well and the challenges that arose along the way were quickly resolved and without any nuisance to us. I would definitely consider Dansk Autoværn on a new contract if the economy is as it should be."
