

DAV DELIVERS NATURAWALL NOISE SCREEN TO AALBORG

Naturawall Noise Shield

For the first time, Dansk Autoværn A/S supplies Naturawall noise screen in Denmark. The screen will be erected on the new detour south of Aalborg. The stretch is approx. 1 km and Naturawall Noise Shield must control noise in relation to the adjacent residential area.

Naturawall provides a natural look

Naturawall Noise shield is unique because it is planted - in this case with ivy. It thus gives a natural, green expression that can remotely resemble a hedge. It provides a smooth transition from road to residential area and at the same time maximises noise reduction.

Naturawall is chosen by M. J. Eriksson A/S, who is the main contractor on the project along with Aalborg Municipality. The delivery is divided into 2 stages and the first part should be completed in week 47. Jonas Press Nielsen, construction manager at M. J. Eriksson explains about the delivery: "We have worked closely with Dansk Autoværn around the delivery and have optimised the process continuously. It worked fine."
