

DAV NORDIC A/S SOLVES NOISE PROBLEM

in Brædstup

After fighting for 7 years, the homeowners in Brædstup received a 329 m long noise screen from DAV NORDIC A/S. The noise barrier dampens the noise from traffic on Horsensvej and Silkeborgvej, where car traffic has increased from 4.000 cars a day to 17.000 over the past 15-20 years.

Homeowners satisfied

Jørgen Møller, who is a homeowner, says: "We are very pleased with this solution. It has been a long and tough fight, but now we have solved the problem and both DAV NORDIC A/S and the municipality have adhered to the schedule, so we are very happy. Previously it was no pleasure to stay in our backyard or on the terrace due to the noise, but now it is a completely different matter. At the same time we believe, that we are on the verge of avoiding deterioration in our property value, so I would in every way recommend it to others."

Green Wall noise screen

The solution is a Green Wall noise screen, which is a noise screen with green planting that falls naturally into the residential area. The noise screen is customised and installed in no time.
